

# INFOSHEET

## LOCKUP™ SPECIALTY HERBICIDE

Dow AgroSciences

**LockUp™**  
Specialty Herbicide

GOLF

LAWN

### ACTIVE INGREDIENT:

Penoxsulam

### PROFILE:

Broad-spectrum activity of penoxsulam allows it to be best used in combination with other herbicides to control weeds important to lawn care professionals, golf course superintendents, sports turf managers and sod producers. This granular product provides activity at low use rates and shows increased efficacy compared with other granular herbicide options.

### PARTIAL LIST OF WEEDS CONTROLLED:

- White clover
- Dandelion
- Dollarweed
- Broadleaf plantain
- Chickweed
- English lawn daisy
- Florida betony
- Ground ivy
- Kyllinga
- Lespedeza
- Annual sedges
- Virginia buttonweed

### SIGNAL WORD:

Caution

### MODE OF ACTION:

ALS inhibitor (inhibits enzyme synthesis and stops cell division)

### ABSORPTION:

Penoxsulam is a systemic herbicide that is absorbed via leaves, shoots and roots and then translocated into other plant parts.

### FEATURES:

- Can be used on warm- and cool-season turf
- Provides residual control of susceptible weeds, depending on use rate and environmental conditions
- Low use rates — generally 0.02 to 0.06 pound of active ingredient per acre
- Selective broadleaf weed control in granular formulation
- Can be used on wet or dry foliage
- Superior postemergence control of key broadleaf weeds in turf such as white clover, dollarweed, kyllinga and English lawn daisy
- Accepted for review and registration under the Reduced Risk Pesticide Initiative of the U.S. Environmental Protection Agency
- Favorable environmental and toxicological profiles
