

# 3 Signs your Well Pump Needs an Upgrade

*Operating an efficient irrigation system is a great way to save time and money. Irrigation efficiency begins at the source: the well pump.*

*Here are a few signs to look out for when your well pump is coming up in age.*

## *Visible Leaks*

A leaky pump is a tell-tale sign of aging, damaged, or failing seals. The best solution is to ask for a professional opinion on repair resus replacement of your well pump.

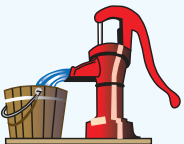

## *Reduced Performance*

Much like any mechanical device, well pumps are subject to wear and tear from prolonged use. Sometimes upgrading your system is more cost effective than individual repairs. If you notice a deterioration in your well pumps performance, it is wise to get the opinion of a professional before making any big decisions.

## *Outdated Parts*

If your pump is older, there's a chance that parts for it will be nearly impossible to find. Not being able to find parts in emergency situations could lead to serious delays. Avoid the hassle of hunting down new parts for an old system and upgrade your well pump today!

*If any of these signs seem familiar, give W.P. Law a call and see if a well pump upgrade is right for you!*
